Fall 2007 Edition

Winnemucca Race Route Applications

The Winnemucca Field Office currently has a GIS database of approximately 30 motorcycle, off-road 4WD and road rally routes analyzed within the NEPA process since 2000. Although new routes can be explored, the cost recovery regimen can be prohibitive for some clubs seeking race permits on public land. To minimize costs while still offering different routes each year, race organizers are proposing new routes derived from previous route segments. The Race Route GeoPDF map greatly facilitates this planning process.

This map format allows for electronic communication directly via an interactive map containing not only documented, approved routes but background data such as land status and USGS topology maps. A race organizer proposes a route by tracing previous routes. Comments can be attached to each segment if desired. The proposed locations and comments are exported to a file that is easily distributed by e-mail. The comment file is imported to the recipient's copy of the map to review marked proposals, reply to comments and add their own markup. Once a route is finalized, the BLM can convert this file for use in GIS for analysis and approval.

Example of proposed route and associated comments marked in GeoPDF.
